## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, 59-73 and 85, drawn to a measurement device, classified in class 324, subclass 750.
- II. Claims 15-58 and 74-84, drawn to a method to obtain emission data, classified in class 324, subclass 750.

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process such as to measure strength of vector force field.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

**If applicant elects Group I**, further election of species is required as follows:

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species of fig. 4;

Species of fig. 5,

Species of fig. 6;

Species of fig. 9A,

Species of fig. 9B,

Species of fig. 10;

Species of fig. 11,

Species of fig. 14.

**If applicant elects Group II**, further election is required as follows:

This application contains method claims directed to the following patentably distinct species of the claimed invention:

A: Claims 15-22, are directed to a method comprising a sensor and a source of a field to obtain a representation of a three-dimensional nature of the field on said sensor.

B: Claims 23-33, are directed to a method of obtaining an emissions data to determine a quality of a second measured signal at selected frequency.

C: Claims 34-43, are directed to a method of obtaining an emissions data to obtain a data value from a measured signal using a magnitude and direction of a vector.

D: Claims 44-51 are directed to a method of obtaining an emissions data to obtain a data value from a measured signal by outputting a representation of a field in at least three dimensions.

E: Claims 52-58 are directed to method of obtaining a susceptibility data using data signal corresponding to a different value of the quality of a field on the electronic device.

Art Unit: 2829

F: Claims 74-79 are directed to method of measuring vector field to obtain representation of vector field.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims appear to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 2829

A telephone call was made to Carola Emelius-Swartz (at office of George Pappes, Phone: 858-449-2465) on 02/03/2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
